Biosolids Digester Facilities Project

Our Sewer System Upgrades are Underway

Built in 1952, the Southeast Treatment Plant (SEP) is the City’s largest wastewater treatment facility, but many of its facilities are past their useful life and generate odors that impact the neighborhood. We are investing over \$2 billion to transform this facility into a modern resource recovery center, an attractive workplace and a neighborhood asset.

Biosolids Digester Facilities Project (BDFP)

The Biosolids Digester Facilities Project (BDFP) will replace the outdated existing solids treatment facilities with more reliable, efficient, and modern technologies. The new facilities will produce a higher quality biosolids, capture and treat odors more effectively, and maximize biogas utilization. In addition, the project will locate the digesters farther away from existing residences and make visual improvements in and around the SEP.

What are Biosolids?

Biosolids are the nutrient-rich soil-like product of the wastewater treatment process that can be beneficially used as a synthetic fertilizer-replacement and soil amendment.

PROJECT MILESTONES

- ✓ Project Approval
Spring 2018
- ✓ Start of Construction
Summer 2019
- Final Completion
Summer 2026

PROJECT MAP

PROJECT BENEFITS

- Produce higher quality “Class A” biosolids that have greatly expanded beneficial uses.
- Meet projected wastewater treatment needs through 2045.
- Reduce odors from the treatment process.
- Improve the ability for these critical facilities to withstand a 7.8 earthquake on the San Andreas Fault.
- Provide a more attractive look to the facilities to better fit in with the neighborhood.
- Fund local public art in support of the Bayview Arts Master Plan.
- Provide opportunities for local workers and firms.

About the Sewer System Improvement Program

The Southeast Treatment Plant Biosolids Digester Facilities Project is part of the Sewer System Improvement Program (SSIP), a multi-billion-dollar citywide investment to upgrade our aging sewer system. The SSIP is the result of an extensive community planning process and will ensure a reliable, sustainable and seismically safe sewer system now and for generations to come. For more information on SSIP and to stay up to date, please visit sfpuc.org/ssip.
